

Aman Mulani

AI Engineer | LLM Products, Agents & Production RAG

+91-7378617999 | mulaniaman0504@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Software Engineer with 4+ years designing and shipping production AI and full-stack systems, specializing in LLM-powered products, RAG pipelines, and autonomous agents. I take ideas from concept to production and own them end-to-end, turning ambiguous problems into reliable products that deliver real business impact. I value pragmatic, well-architected solutions, collaboration across teams, and building systems that stay simple to use and dependable to operate at scale.

WORK EXPERIENCE

Software Engineer, AI & Full-Stack — THG Ingenuity

Aug 2025 – Present

- Own the **AI shopping assistant** for THG storefronts (Myprotein, Lookfantastic), an embeddable chat widget built with Lit and backed by FastAPI services and **Google ADK agents on Vertex AI**. Uses tool calling and session memory for conversational product discovery and is live on customer-facing production storefronts.
- Designed and shipped an internal **RAG knowledge assistant** (LLM APIs, **Pinecone**) over the company's internal documentation, cutting information-discovery time by ~40% and deflecting repetitive support queries. Owned embedding-model selection, chunking strategy, and retrieval trade-offs balancing accuracy, latency, and cost.
- Automated support-ticket triage from ServiceDesk Plus using an **n8n workflow with LLM summarization**, reducing manual tracking effort.
- Built **schema-validation pipelines** in GitHub Actions that block invalid configuration before release, cutting config-related production incidents by ~60%.
- Ship features end-to-end (Astro.js frontend, Python/GraphQL backend) on a large-scale multi-tenant ecommerce platform powering multiple THG brands.

Product Engineer, Full-Stack — Razorpay

Apr 2024 – Aug 2025

- Led development of a **config-driven, white-labeled Push Provisioning platform** that lets new banking partners onboard through configuration rather than per-partner custom builds, turning each integration from a dedicated engineering effort into a repeatable setup process.
- Built and owned **Python/FastAPI services for card tokenization and token lifecycle management**, covering security-sensitive workflows where correctness and auditability were hard requirements.
- Improved platform **observability** (structured logging, monitoring, alerting), reducing average incident resolution time.
- Adopted **AI-assisted development practices** early, using **Claude Code** and **Cursor** with structured prompt engineering for code generation, refactoring, and test coverage on the provisioning platform, and helped shape how the team used these tools safely in a security-sensitive payments codebase.

Web Developer — HMX Media

Aug 2022 – Mar 2024

- Built an internal **CLI automation tool** (React, TypeScript, Node.js) that streamlined content-localization workflows, replacing a manual per-asset process.
- Delivered performance-sensitive interactive experiences with **Canvas and WebGL** and contributed to shared UI libraries used across teams.

PROJECTS

Chitra.ai — Multimodal Video Analysis Service (Python, FastAPI, OpenAI, Docker, CI/CD)

amanmulani09/chitra.ai

- Built an end-to-end service that analyzes video and speech and produces **scored, prioritized insight reports**. Owned the system from architecture through production, with automated build-and-release pipelines across staging and production.

Codo — AI Code Review Agent (Python, LangChain, FastAPI, Redis, GitHub Apps)

amanmulani09/codo

- Built an autonomous agent that reviews pull requests via GitHub Apps, flagging **correctness issues, security risks, and potential bugs** before human review.

TECHNICAL SKILLS

AI / LLM: LangGraph, LangChain, Google ADK, Vertex AI, RAG pipelines, agentic systems (tool calling, memory, MCP / FastMCP), prompt & context engineering, Pinecone, vLLM

Evals & Observability: DeepEval, Langfuse, Grafana, Sentry, structured logging & tracing

Languages & Backend: Python, TypeScript, SQL, FastAPI, Node.js, PostgreSQL, Redis, Pydantic, REST/GraphQL, microservices

Frontend: React, Next.js, Astro.js, React Native

Cloud & DevOps: AWS, Docker, GitHub Actions, CI/CD

EDUCATION

Bachelor of Computer Applications (BCA) — College of Computer Science and Information Technology
