

Aman Mulani

+91 7378617999 mulaniaman0504@gmail.com portfolio

Full-Stack & AI Engineer building production web applications and AI-powered products across ecommerce and payments. Experienced across frontend, backend, AI integrations, system design, deployment, and production support. Comfortable taking ownership of features from requirements and architecture through implementation, release, and iteration.

Work Experience

Software Engineer, AI & Full-Stack – THG Ingenuity

Aug 2025 – Present

- Built and maintained an **AI Shopping Assistant** used across ecommerce brands, working across the frontend, FastAPI backend, LLM integrations, tool calling, retrieval, and production monitoring.
- Architected and built an in-house **multi-tenant CMS platform** for managing content across multiple business websites, with a shared platform architecture that reduced duplicated infrastructure and allowed teams to reuse common services, components, and deployment practices.
- building and shipping **end-to-end features and reusable widgets for a multi-tenant ecommerce storefront**, working across the **Astro.js frontend** and **FastAPI + GraphQL backend**, while managing PR reviews, releases, testing, and production delivery.
- Built RAG-based internal applications covering document ingestion, chunking, embeddings, retrieval, LLM integration, and evaluation, with focus on practical quality, latency, and cost.
- Delivered AI-powered product experiences including a **multimodal AI Stylist**, integrating AI capabilities into existing customer journeys and production systems.
- Built automation workflows using **Python, APIs, n8n, and LLMs** to reduce manual support and operational work.

Product Engineer, Full-Stack – Razorpay

Apr 2024 – Aug 2025

- Designed and built a **configuration-driven push provisioning platform** that simplified partner integrations and supported multiple integration requirements through a common architecture.
- Developed and maintained **Python/FastAPI services** for secure card tokenization and lifecycle management, with emphasis on reliability, validation, and maintainability.
- Delivered end-to-end product features across **React, TypeScript, Python, APIs, and databases**, working with product, QA, and platform teams.
- Improved application reliability through **automated testing, integration testing, CI/CD, and production monitoring**.
- Contributed to design discussions, code reviews, technical documentation, and day-to-day engineering improvements across the team.

Web Developer – HMX Media

Aug 2022 – Mar 2024

- Built internal tools that automated localization workflows and reduced repetitive engineering work.
- Developed reusable frontend components and shared UI libraries using **React, JavaScript, Canvas, and WebGL**.
- Worked on interactive, performance-sensitive web experiences and collaborated with designers and engineers to deliver production features.

Personal Projects

Codo – AI Code Review Agent

GitHub

- Built an AI-powered code review service integrating GitHub Apps, FastAPI, Redis, and LLMs to analyze pull requests and surface potential code quality and security issues.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL

Applied AI: LLM APIs, Enterprise RAG (Embeddings, Vector Search, Retrieval), LangGraph, LangChain, Agentic Systems (Tool Calling, MCP, Memory), Prompt Engineering, Evals

Backend: FastAPI, Node.js, PostgreSQL, Redis, REST, GraphQL

Frontend: React, Next.js, React Native, Astro, Tailwind CSS, Playwright

Cloud & Observability: AWS (S3, CloudFront, ECS, Route53), Docker, GitHub Actions, Grafana, Sentry, Coralogix

Engineering: System Design, API Design, Automated Testing, Observability, Production Debugging, Performance Optimization, Code Reviews

Education

Bachelor of Computer Applications (BCA) – College of Computer Science and Information Technology

2020–2023
